

# INTENSITY SERUM

## BONN RESULTS

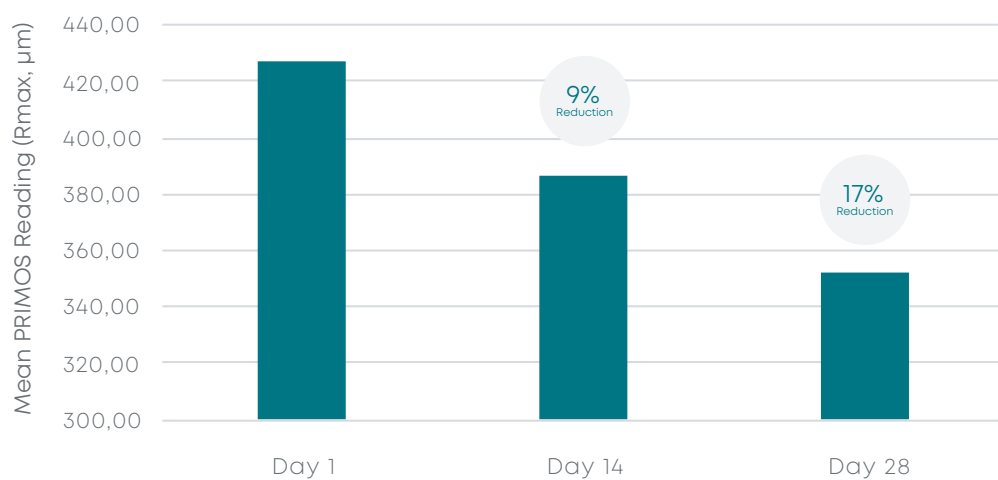

The Intensity Serum makes use of an extract of Mafane from Reunion, which contains an active called Spilanthol. This acts to relax the muscles under the skin and produce a short-term, intense wrinkle reduction effect. This lasts about 24 hours, but with consistent use, the effects are cumulative.

Other components of this product support its long-term anti-ageing effects. Devil's Claw (*Harpagophytum procumbens*) extract acts to inhibit COX-2, an enzyme that results in inflammation. This anti-inflammatory effect helps to address inflammageing. An extract of *Kigelia africana* provides the skin-firming and tightening properties that this plant is known for.

## Wrinkle Depth

Esse Intensity Serum **reduces wrinkle depth by 17%** in 28 days.

20 women (average age 48.1 yrs) applied Intensity Serum twice daily. After 14 days, wrinkle depth had been reduced by an average of 9.1%. After 28 days, wrinkle depth had decreased by an average of 17.0%. An improvement was seen in 100% of the volunteers over the course of the study.
