

EYE CONTOUR CREAM

BONN RESULTS

The three main active ingredients in the Eye Contour Cream are Belides (Bellis perennis extract), Albizia bark extract and Darutoside.

Bellis perennis (daisy) extract protects from UV-induced damage to skin cells, reduces hyperpigmentation and dark rings by inhibiting tyrosinase, and improves collagen synthesis.

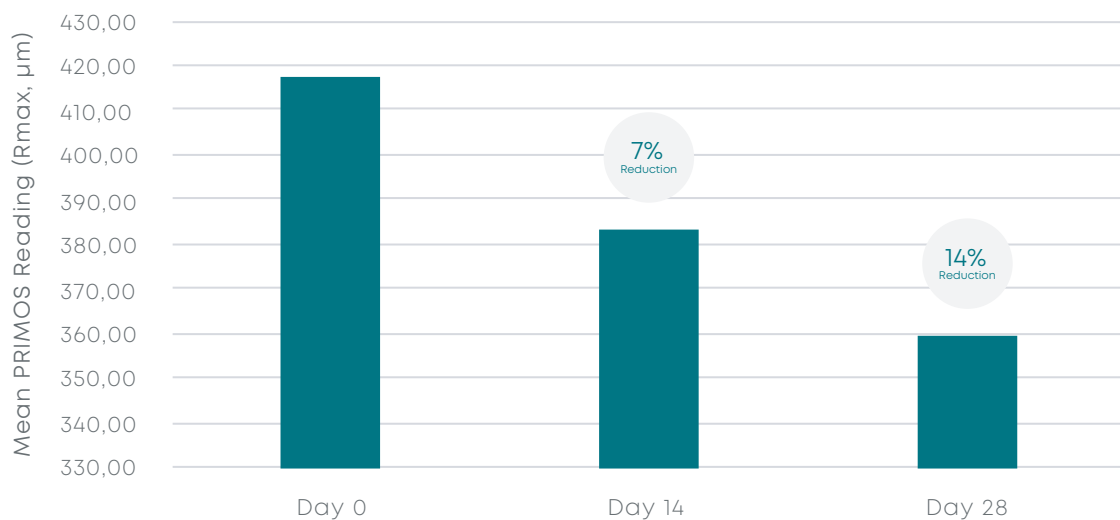

Albizia julibrissin bark extract helps to control the growth of small blood vessels, reducing darkness under the eye and consolidating the network for effective nutrient delivery. It also has antioxidant activity, so protects from reactive oxygen species.

Darutoside inhibits the expression of the pro-inflammatory protein COX-2, and reduces the activity of inflammatory immune cells. This reduces swelling and puffiness in the eye area. Reduction of inflammation also reduces the degradation of important structural proteins like collagen.

Wrinkle Depth

Esse Eye Contour Cream **reduces wrinkle depth by 14%** in 28 days.

20 women (average age 48.0 yrs) applied Eye Contour Cream twice daily. After 14 days, wrinkle depth had decreased by an average of 7,4%. After 28 days, wrinkle depth had decreased by an average of 13,6%. A positive effect was seen in 95% of the volunteers during the course of the study.
